A brilliant, brilliant new production tube. I don't have anything negative to say. I can't find any cons or negative with the Ray tubes.

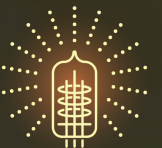

Passion for Sound

These proved to be so good, so resolving, yet never harsh, never annoying...instead they combine really smooth and natural sounds with higher-resolving, really open, really spacious sounds that we expect from great tubes.

iiWi Reviews

In one word: coherent...compared to stock tubes they're more clear. They have a more well-defined and solid bass response. The real differences lie in the upper mid-range and treble response. The fidelity of the upper mid-range is actually quite significantly better than that of the stock tubes....the sound-staging width is a lot more substantial.

Joshua Valour

Resolving...clear-sounding...you can hear more music and less noise...tight...smooth....warm....

I do believe these are worth it if you want to improve the sound of your amplifier.

At **Ray Tubes**, we have a deep-rooted passion for the rich, warm sound that only vacuum tubes can produce. To rekindle this love for an authentic and immersive audio experience, we're proud to create the Ray Vacuum Tubes.

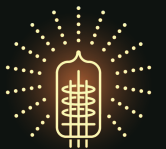

Our vacuum tubes marry the timeless sound of classic audiophile tubes with the reliability, precision, and durability of modern manufacturing, offering a best-of-both-worlds approach that invites customers to experience the rich world of vacuum tubes.

Unlike most tubes available today that are New Old Stock (NOS), our vacuum tubes are brand new, hand-selected, and rigorously-tested to meet our strict quality standards. By bypassing the unpredictable quality of NOS and instead choosing our freshly-minted tubes, we're making the immersive experience of vacuum tubes more accessible.

With a *twelve-month warranty* covering tubes against manufacturing defects, we'll take care of your customers during the first year of their ownership.
